

Pediatric Medication Emergency Dosing and Intervention Cards

Purpose: Instructions for using the **Michigan Medication Emergency Dosing and Intervention Cards (MI-MEDIC)**. Protocols are dynamic and may change based on current science. EMS personnel must be familiar with the most current set of approved protocols which take precedence over the information included in the MI-MEDIC.

1. Obtain correct weight of the child
 - a. If patient's actual weight is known, use MI MEDIC card for that weight. (DO NOT CONFUSE POUNDS and KILOGRAMS)
 - b. If patient's weight is not known, use length-based resuscitation tape to determine the proper color zone.
 - c. If a length-based resuscitation tape not available, use patient's age to determine color of card to use. DO NOT GUESS THE WEIGHT OF THE CHILD.
2. Select appropriate weight based medication for intervention.
3. Select the corresponding colored card.
4. Select desired medication from Cardiac Resuscitation or Medical Conditions.
5. ASSURE medication CONCENTRATION on hand is as specified on card.
6. Some medications should be diluted as instructed on card.
7. If dilution is required, follow steps to dilute entire vial of medication prior to drawing up final ml volume to administer.
8. Confirm medication dose and volume to be delivered.
9. Administer volume of medication as desired.
10.  Contact Medical Control for questions or concerns.

NOTE: Some medication doses have been rounded for safety and ease of use for the prevention of medication errors. These doses may not exactly correspond with the mg/kg dose in the pediatric treatment protocols. The use of these rounded doses has been approved for use and administration will be acceptable as long as the dose was referenced from the MI MEDIC cards.
